## THE CONCEPT

The use of non renewable energies over the years have shown hazardous and negative impact on the environment causing environmental degradation. In the present day scenario most of the nations have substituted the non renewable sources with solar energy, biomass energy, hydropower, geothermal power and other renewable sources of energy to overcome the hurdle.

Today, the demand for energy is consistently growing beyond the limits. Thus, the need for safe and efficient energy management has become an indivisible factor.

The international conference on international regime relating to renewable energy not only focuses on discussing the environmental aspects but also intends to bring out the issues concerning renewable energy in economic, social and legal sectors.

Through this international conference we aim to discuss those key concerns and find a reasonable approach to achieve the way forward by keeping the global needs and environmental factors in mind.
